OTHER ☐ NO COMM INSTALLED \$0

SIZING NOTES:

1. Use a tailor's tape measure in inches to calculate circumference. Start from the center of your forehead; thumbs width above your eyebrows.
2. Take full 360° measurement, making sure the tailor's tape measure does not drift up or down into the smaller sections of your head.
3. Keep the tape measure in a straight line and record the measurement at the largest part of your head.
4. Measure three times to make sure this is accurate and comfortable to you.
5. Tape measure should lay comfortably around your head. Do not hold loose or synch tight.

DISCLAIMER:

CME is done independently through InEarzSports. For more details, please visit:
